

Senior Medicinal Chemist, Zurich

Rejuveron is a company that develops and invests in drugs and technologies which have the potential to significantly prolong human lifespan. We are seeking a highly motivated senior chemist to lead our medicinal chemistry operations in Zurich, Switzerland.

As an experienced Medicinal Chemist, you should be experienced working in multi-functional project teams. You have a solid understanding of all disciplines relevant in drug discovery (eg: toxicology, pharmacology, clinical) to identify and address key issues to enable informed, timely decisions to meet set milestones.

Rejuveron is looking for an energetic and experienced leader with extensive experience leading the discovery of novel small molecule therapeutics from initial hits through first-in-human trials. This position will be responsible for managing both internal and outsourced chemistry resources.

Experience and education requirements

- Ph.D. in Organic Chemistry with 10+ years of experience in the pharmaceutical/biotech industry
- Demonstrated ability to lead small molecule drug discovery programs from initial hit through first-in-human trials
- Experience managing internal and outsourced chemistry personnel, and in team/project leadership
- Highly collaborative, self-motivated, team-oriented, with outstanding oral and written communication skills
- Genuine curiosity for novel approaches to improve drug discovery paradigm generate better candidate molecules
- Demonstrated problem solving skills in challenges facing synthetic organic chemistry and drug discovery
- Strong publication/patent record

Rejuveron offers competitive compensation package with stock options, incl. benefits, a thriving workplace with a stimulating environment and the opportunity to broaden your horizon. For consideration, please submit your resume and cover letter referencing the job title to careers@rejuveron.com. Please note that we can only accept applications from people that have a valid EU work permit.
